

2020 MID-YEAR REPORT

Blue Alliance

INDONESIA
MARINE PROTECTED AREAS

Progress in Numbers

January to June

2,470,000 ha with enhanced biodiversity protection and control of destructive and unsustainable fishing activities.

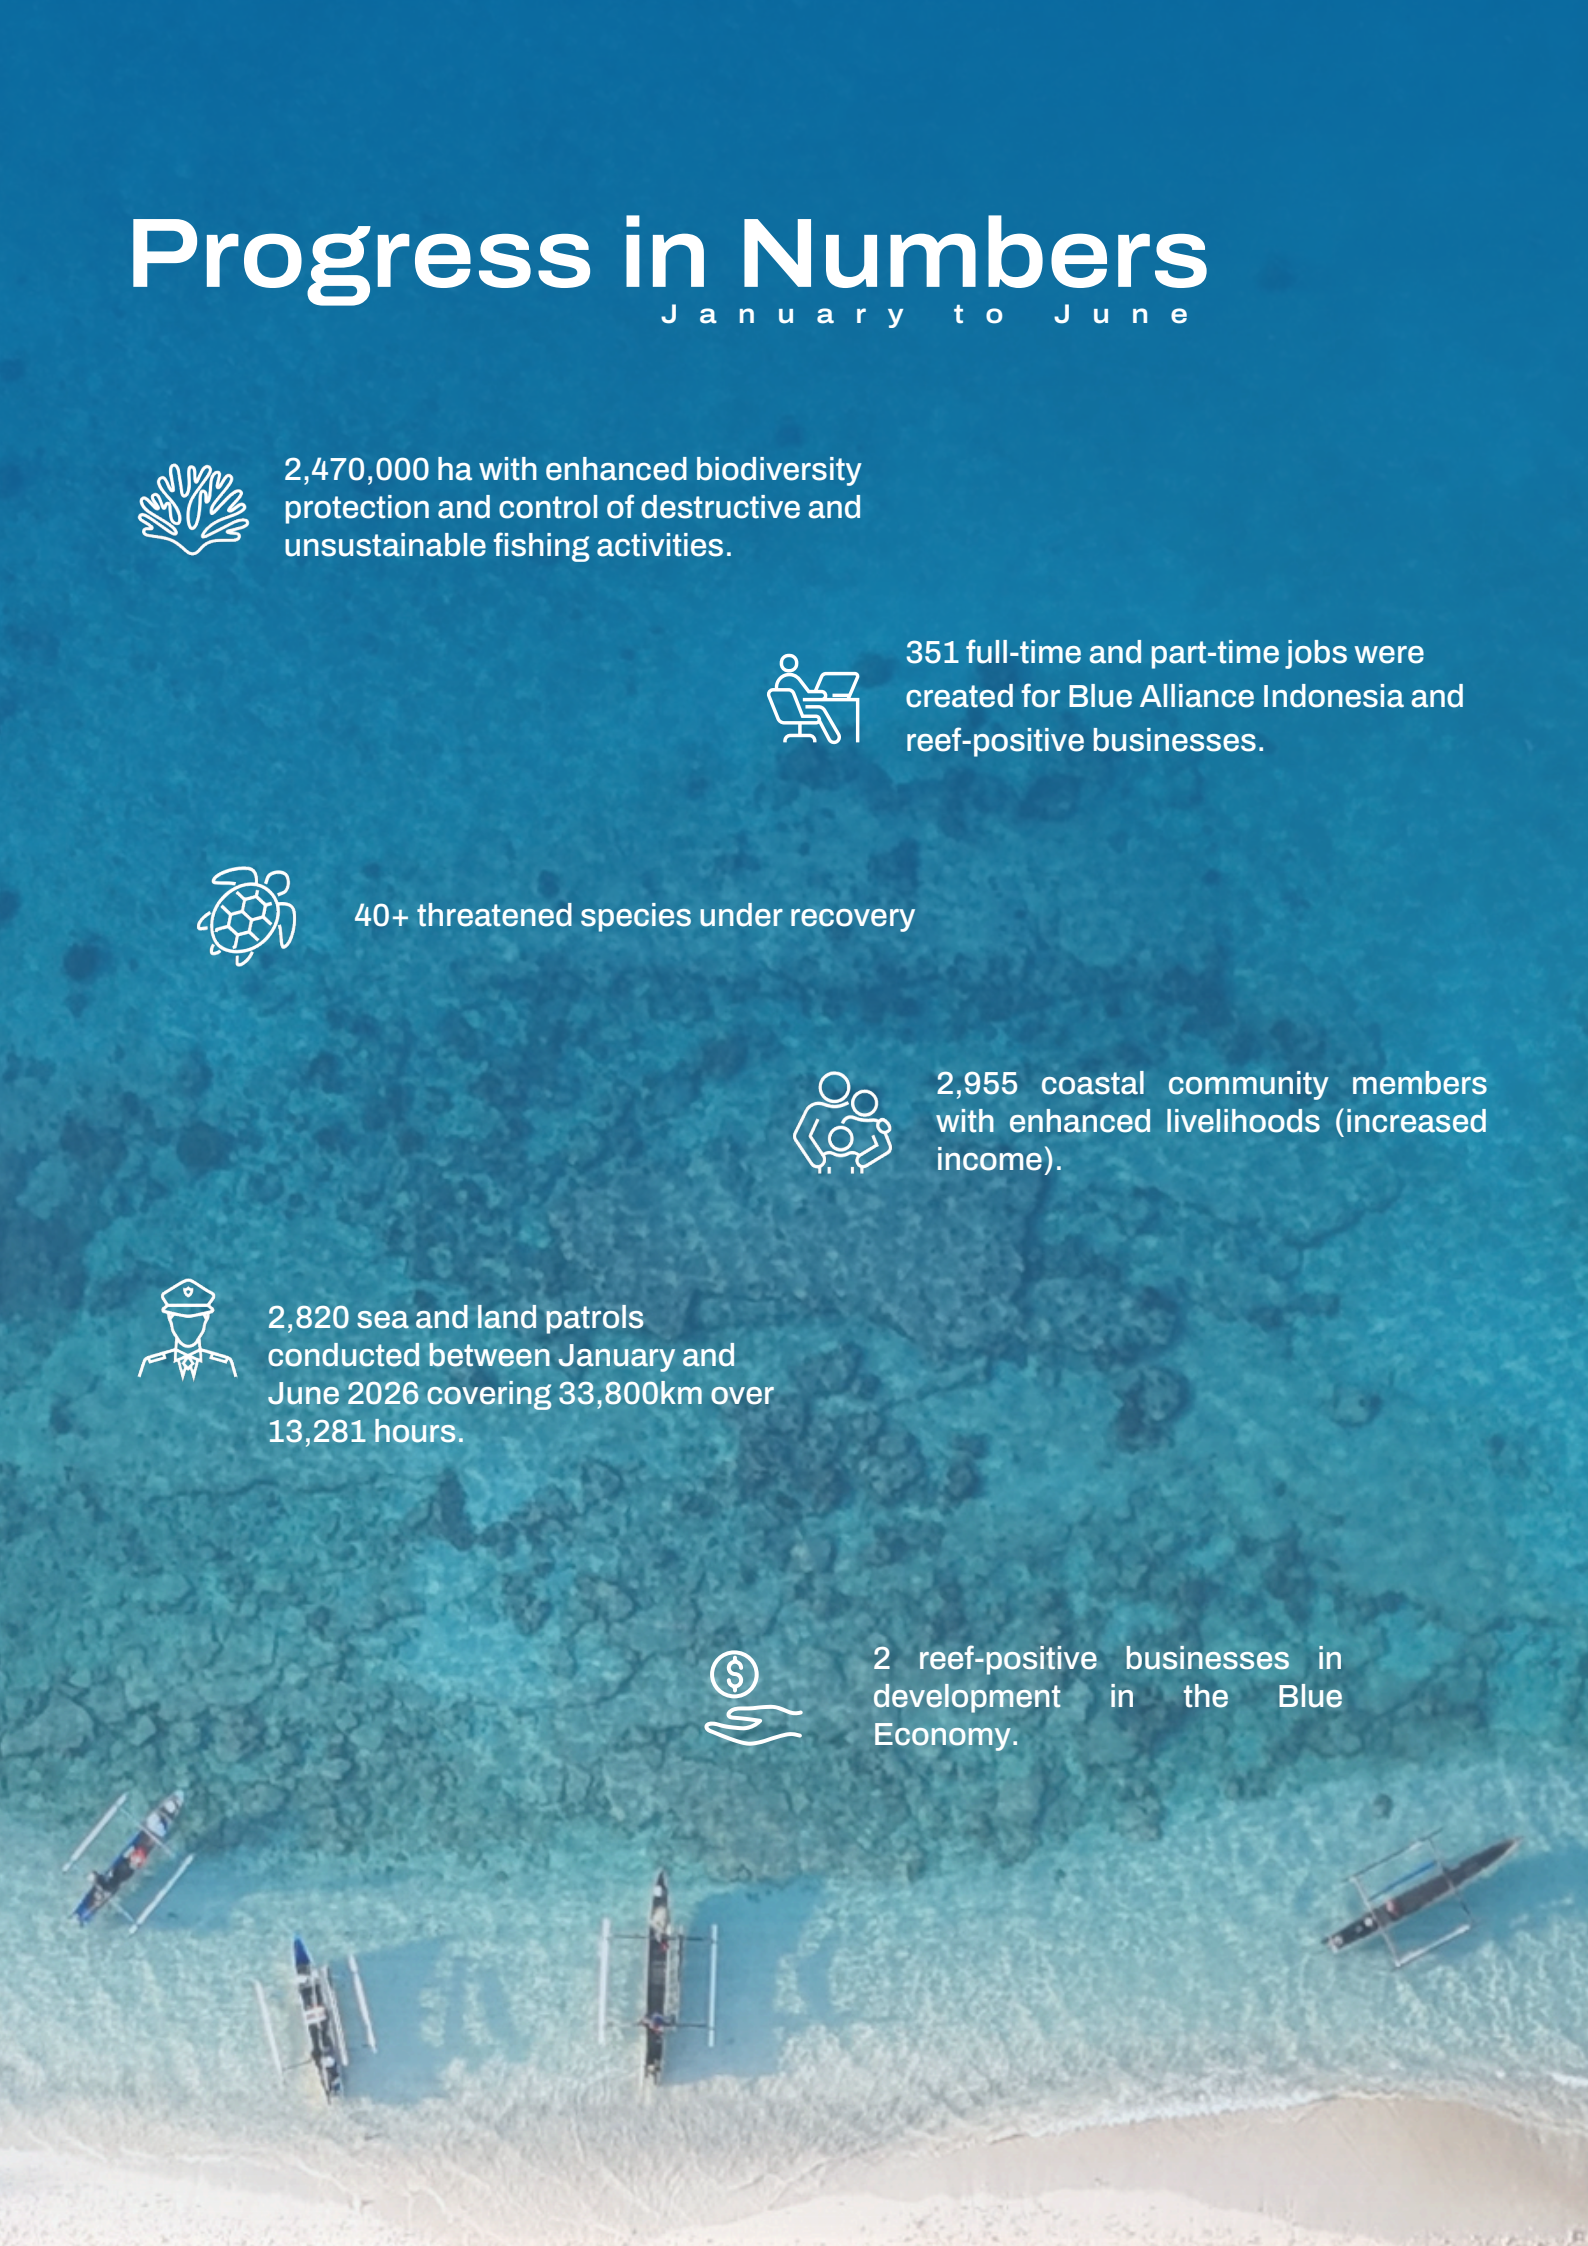

351 full-time and part-time jobs were created for Blue Alliance Indonesia and reef-positive businesses.

40+ threatened species under recovery

2,955 coastal community members with enhanced livelihoods (increased income).

2,820 sea and land patrols conducted between January and June 2026 covering 33,800km over 13,281 hours.

2 reef-positive businesses in development in the Blue Economy.

ABOUT BLUE ALLIANCE

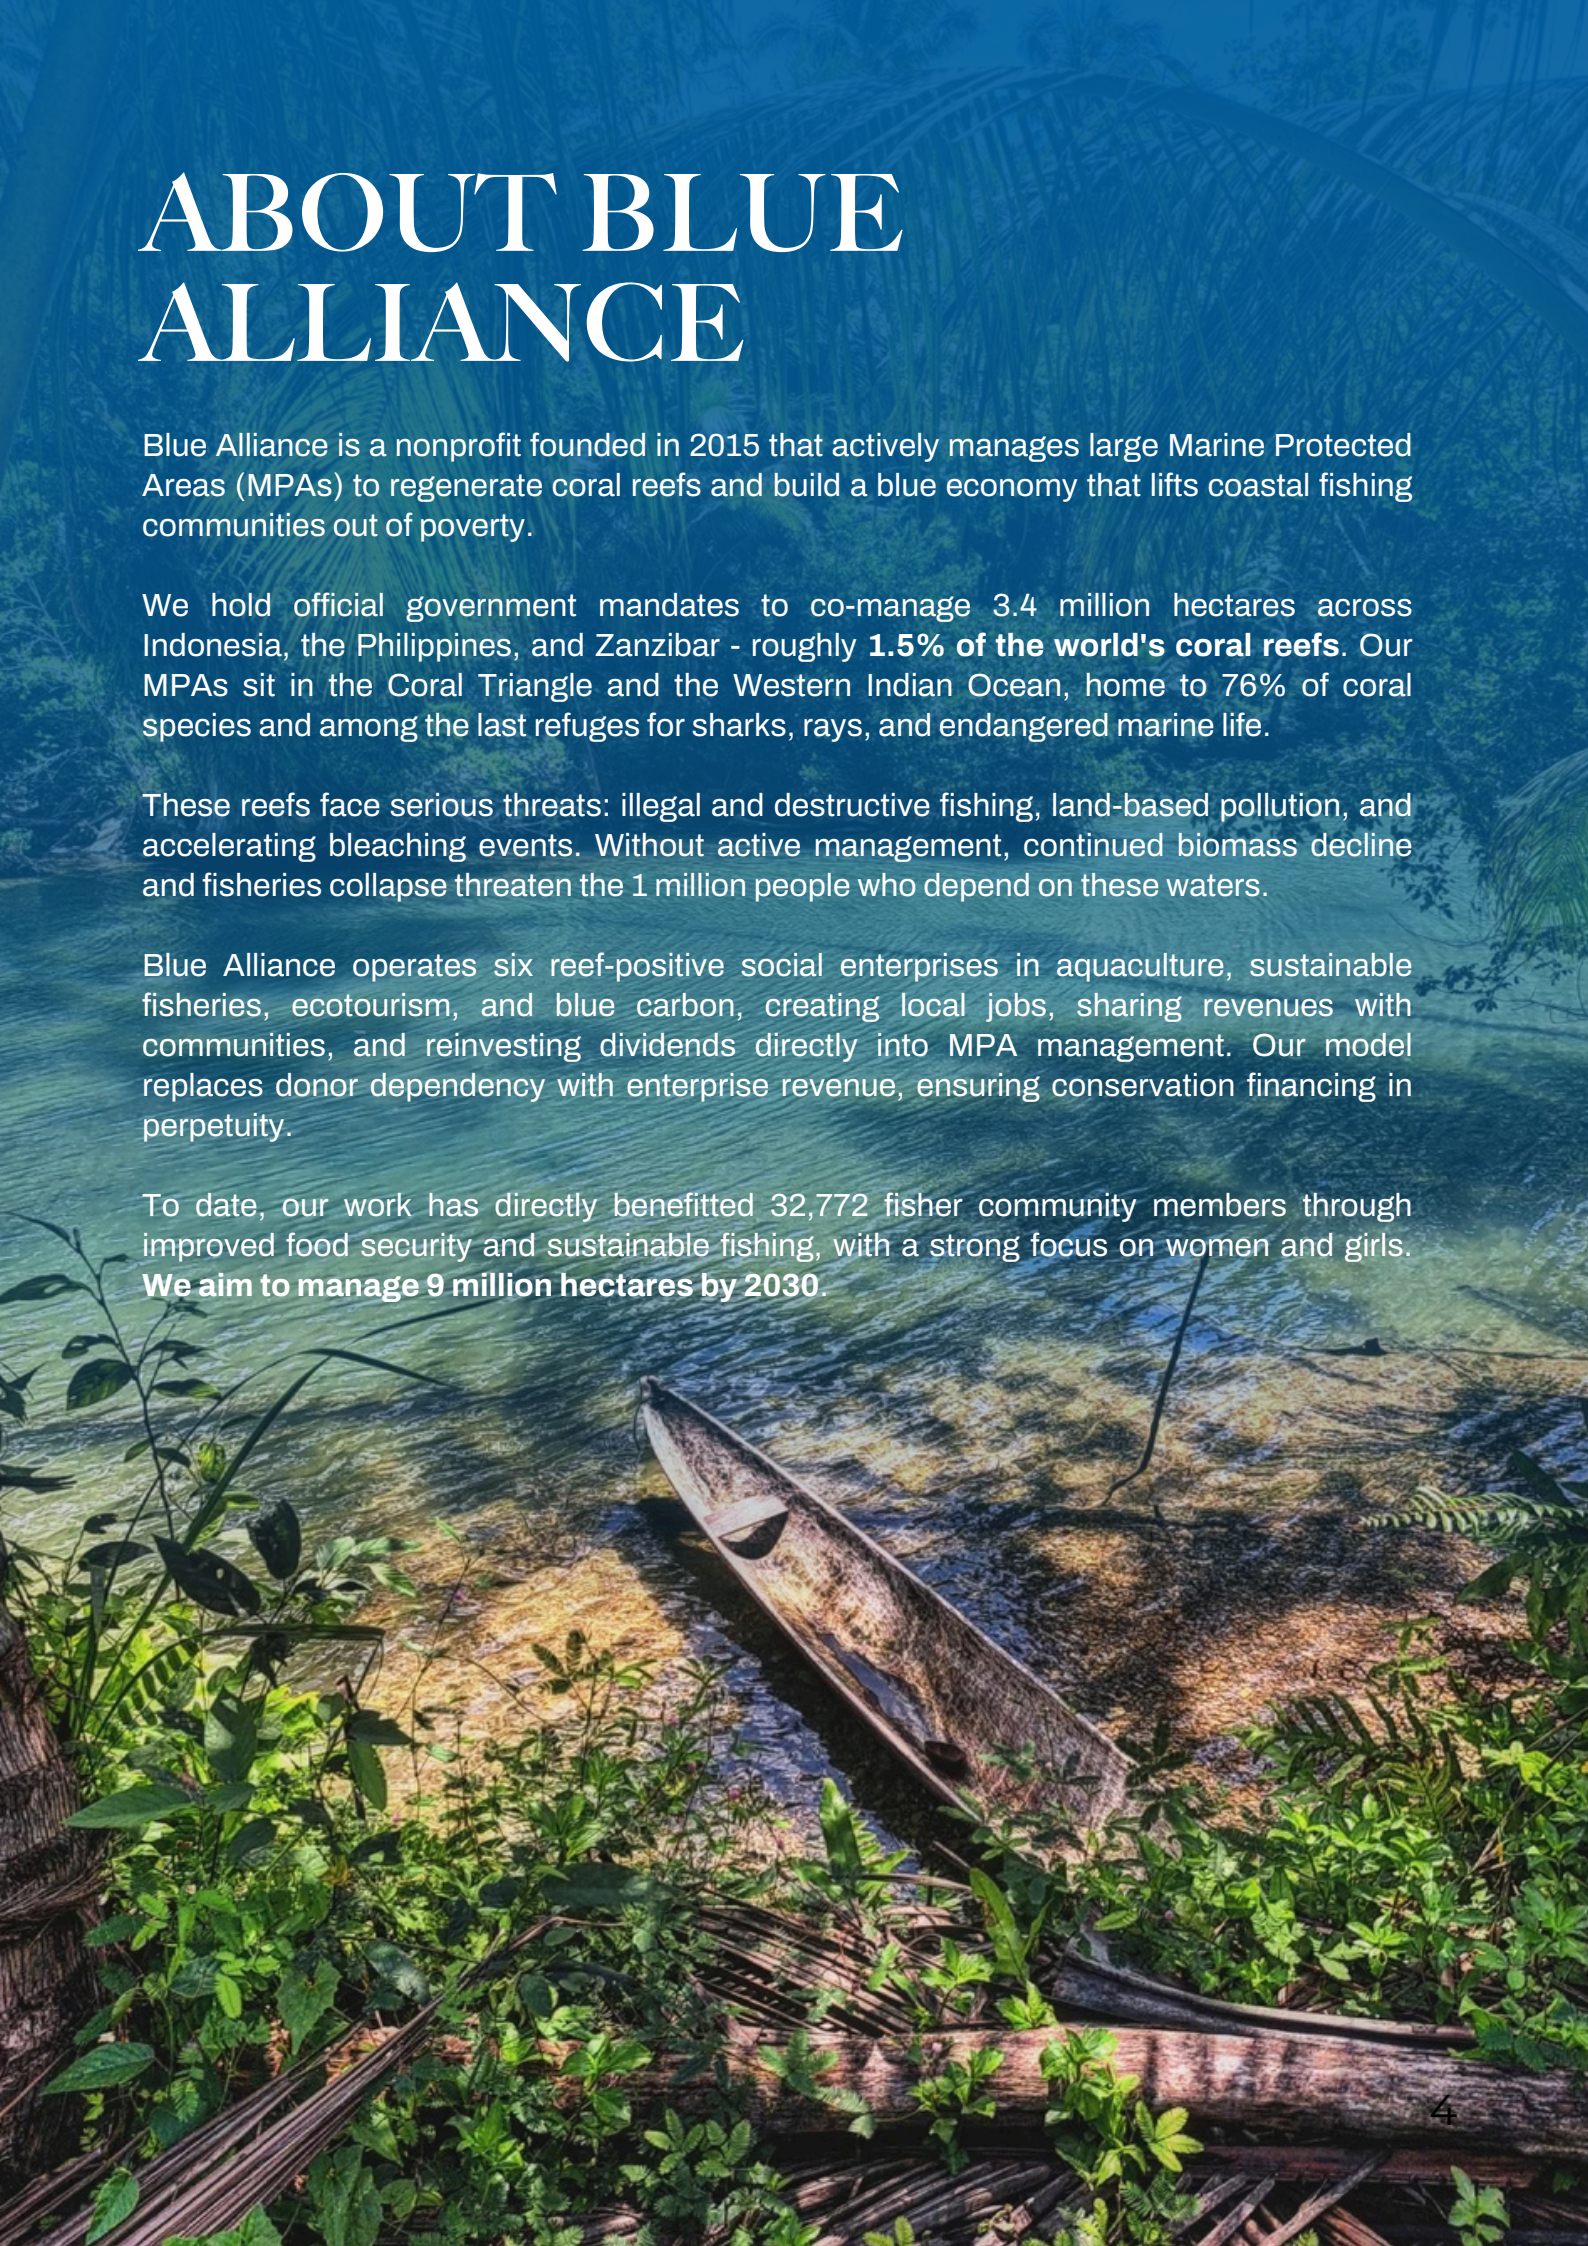

Blue Alliance is a nonprofit founded in 2015 that actively manages large Marine Protected Areas (MPAs) to regenerate coral reefs and build a blue economy that lifts coastal fishing communities out of poverty.

We hold official government mandates to co-manage 3.4 million hectares across Indonesia, the Philippines, and Zanzibar - roughly **1.5% of the world's coral reefs**. Our MPAs sit in the Coral Triangle and the Western Indian Ocean, home to 76% of coral species and among the last refuges for sharks, rays, and endangered marine life.

These reefs face serious threats: illegal and destructive fishing, land-based pollution, and accelerating bleaching events. Without active management, continued biomass decline and fisheries collapse threaten the 1 million people who depend on these waters.

Blue Alliance operates six reef-positive social enterprises in aquaculture, sustainable fisheries, ecotourism, and blue carbon, creating local jobs, sharing revenues with communities, and reinvesting dividends directly into MPA management. Our model replaces donor dependency with enterprise revenue, ensuring conservation financing in perpetuity.

To date, our work has directly benefitted 32,772 fisher community members through improved food security and sustainable fishing, with a strong focus on women and girls. **We aim to manage 9 million hectares by 2030**.

Regenerating the Ocean at Scale
for People and Nature

Banggai Conservation Area

The Banggai archipelago, part of the Coral Triangle which is often referred to as the “Amazon of the Seas”, is known for its exceptional biodiversity. Its remote islands host extensive coral reefs which are home to mantas, rays, endangered sharks, marine turtles, and more than 25 species of groupers, along with unique endemism found nowhere else on Earth. We work with coastal communities as partners to augment the livelihoods of more than 10,000 coastal households, while providing protection for vulnerable species and habitats at risk of degradation.

The 810,000 hectare Banggai Conservation Area in Central Sulawesi is Blue Alliance's most established Indonesian site, co-managed by Blue Alliance Indonesia under a delegated management agreement with the Provincial Government since 2021.

WHO WE ARE

To deliver its mission, Blue Alliance works through three complementary teams working hand in hand:

- **Marine Protected Area Team** – Manages large marine protected areas on the ground, co-patrols with local authorities to stop illegal and destructive fishing, empowers communities to manage and protect their own resources, strengthens coastal livelihoods, and monitors impacts on nature, people, and climate.
- **Blue Economy Team** – Develops and scales sustainable blue economy enterprises in community-based aquaculture, sustainable fisheries, ecotourism and blue carbon to alleviate poverty and generate long-term financial support for marine conservation.
- **Central Services Team** – Ensures effective management of the MPAs and the reef-positive businesses. They structure capacity-building support, technical expertise, and financial and administrative governance to local operations.

OUR MPA TEAM

Andreas Hero Ohoiulun
Country Director

Idham Farsah
Banggai 12 MPA Manager

Marian Doucet
Banggai 6 & 7 MPA Manager

HR and Administration Coordinator

Activities & Progress: I. Engagement & Compliance

Engagement & Compliance

Overview

Enforcement in Banggai is directed by a prioritisation framework that scores each zone against six criteria: illegal fishing, blast fishing, fishing pressure, government support, community engagement and reef complexity. Three high-priority zones were identified on this basis, and patrol coverage expanded from one priority zone to two during the period.

Patrol Activities

A team of 28 rangers, including community-based POKMASWAS rangers, conducted daily patrols by sea and on foot in Banggai Area 12, using GPS, night-vision monoculars, drones and the EarthRanger platform. Joint operations ran with the Provincial Maritime Affairs and Fisheries Service, the marine police and PSDKP. On 25 June, a joint operation in Lelang Matamaling seized a vessel, an engine and a diving compressor used for illegal fishing. Patrols extended into Area 12B in June, following an enforcement assessment in April and community consultations in Liang district.

Joint Operations at Captain Reef

In March, joint patrols with POKMASWAS Tobuiku, the Maritime Police and PSDKP covered Areas 6 and 7, including Captain Reef. The reef is an important fishing ground for the Taima village community and has been under pressure from dynamite fishing by fishers from outside the area.

Patrols in Area 12A

Separate patrols with Polairud in Conservation Area 12A focused on sites where explosives and prohibited gear had been reported, with officers taking a preventative approach toward fishers previously identified.

Building Community Surveillance Capacity

In late June, a three-day joint training session with PSDKP, POLAIR, UPT PPKKP3K Region III and the Denpasar Marine Affairs Office addressed the role of Pokmaswas community monitoring groups and the legal framework protecting threatened species, covering what community monitors can and cannot do during vessel checks and how reports are followed up. It was followed by a joint night patrol in Batusimpang Village in response to community reports of illegal fishing and poison use.

Threat monitoring

Underwater acoustic recorders logged 1,717 suspected blast-fishing detonations across monitored reefs between January and June, and 44 illegal fishing incidents were recorded in EarthRanger, most involving explosives. Detections rose over the period, partly because recorders were added in Area 12B, where patrols began in June. The data now direct patrols to the reefs under most pressure.

Activities & Progress: II. Science & Conservation

Science & Conservation

Overview

The science team ran underwater visual census surveys, fish landing surveys and experimental catch per unit effort campaigns with artisanal fishers, supported by low-cost acoustic detection of blast fishing detonations. Recovery targets are set at 600 kg per hectare in no-take zones within ten years. All data is managed through the Monitoring, Evaluation and Learning system and shared in open databases including MERMAID.

Certified Biomass Results

The CNRS audit of 2025 results certified a 23.3 percent rise in commercial fish biomass in Banggai Area XII, from 227.6 to 280.6 kg per hectare, and confirmed improved catch productivity for artisanal fishers in Area VI.

Sea Turtle Protection

In March, rangers and the Sea Turtle Rangers of Kuntang Village rescued and relocated a clutch of 106 olive ridley eggs to the village hatchery. Eighty-four hatchlings were released, the first nest of 2026 in the Area VII conservation area. Ranger Adrianto separately relocated a nest at risk from poachers in Area 6 to a managed nesting site.

Reef Restoration

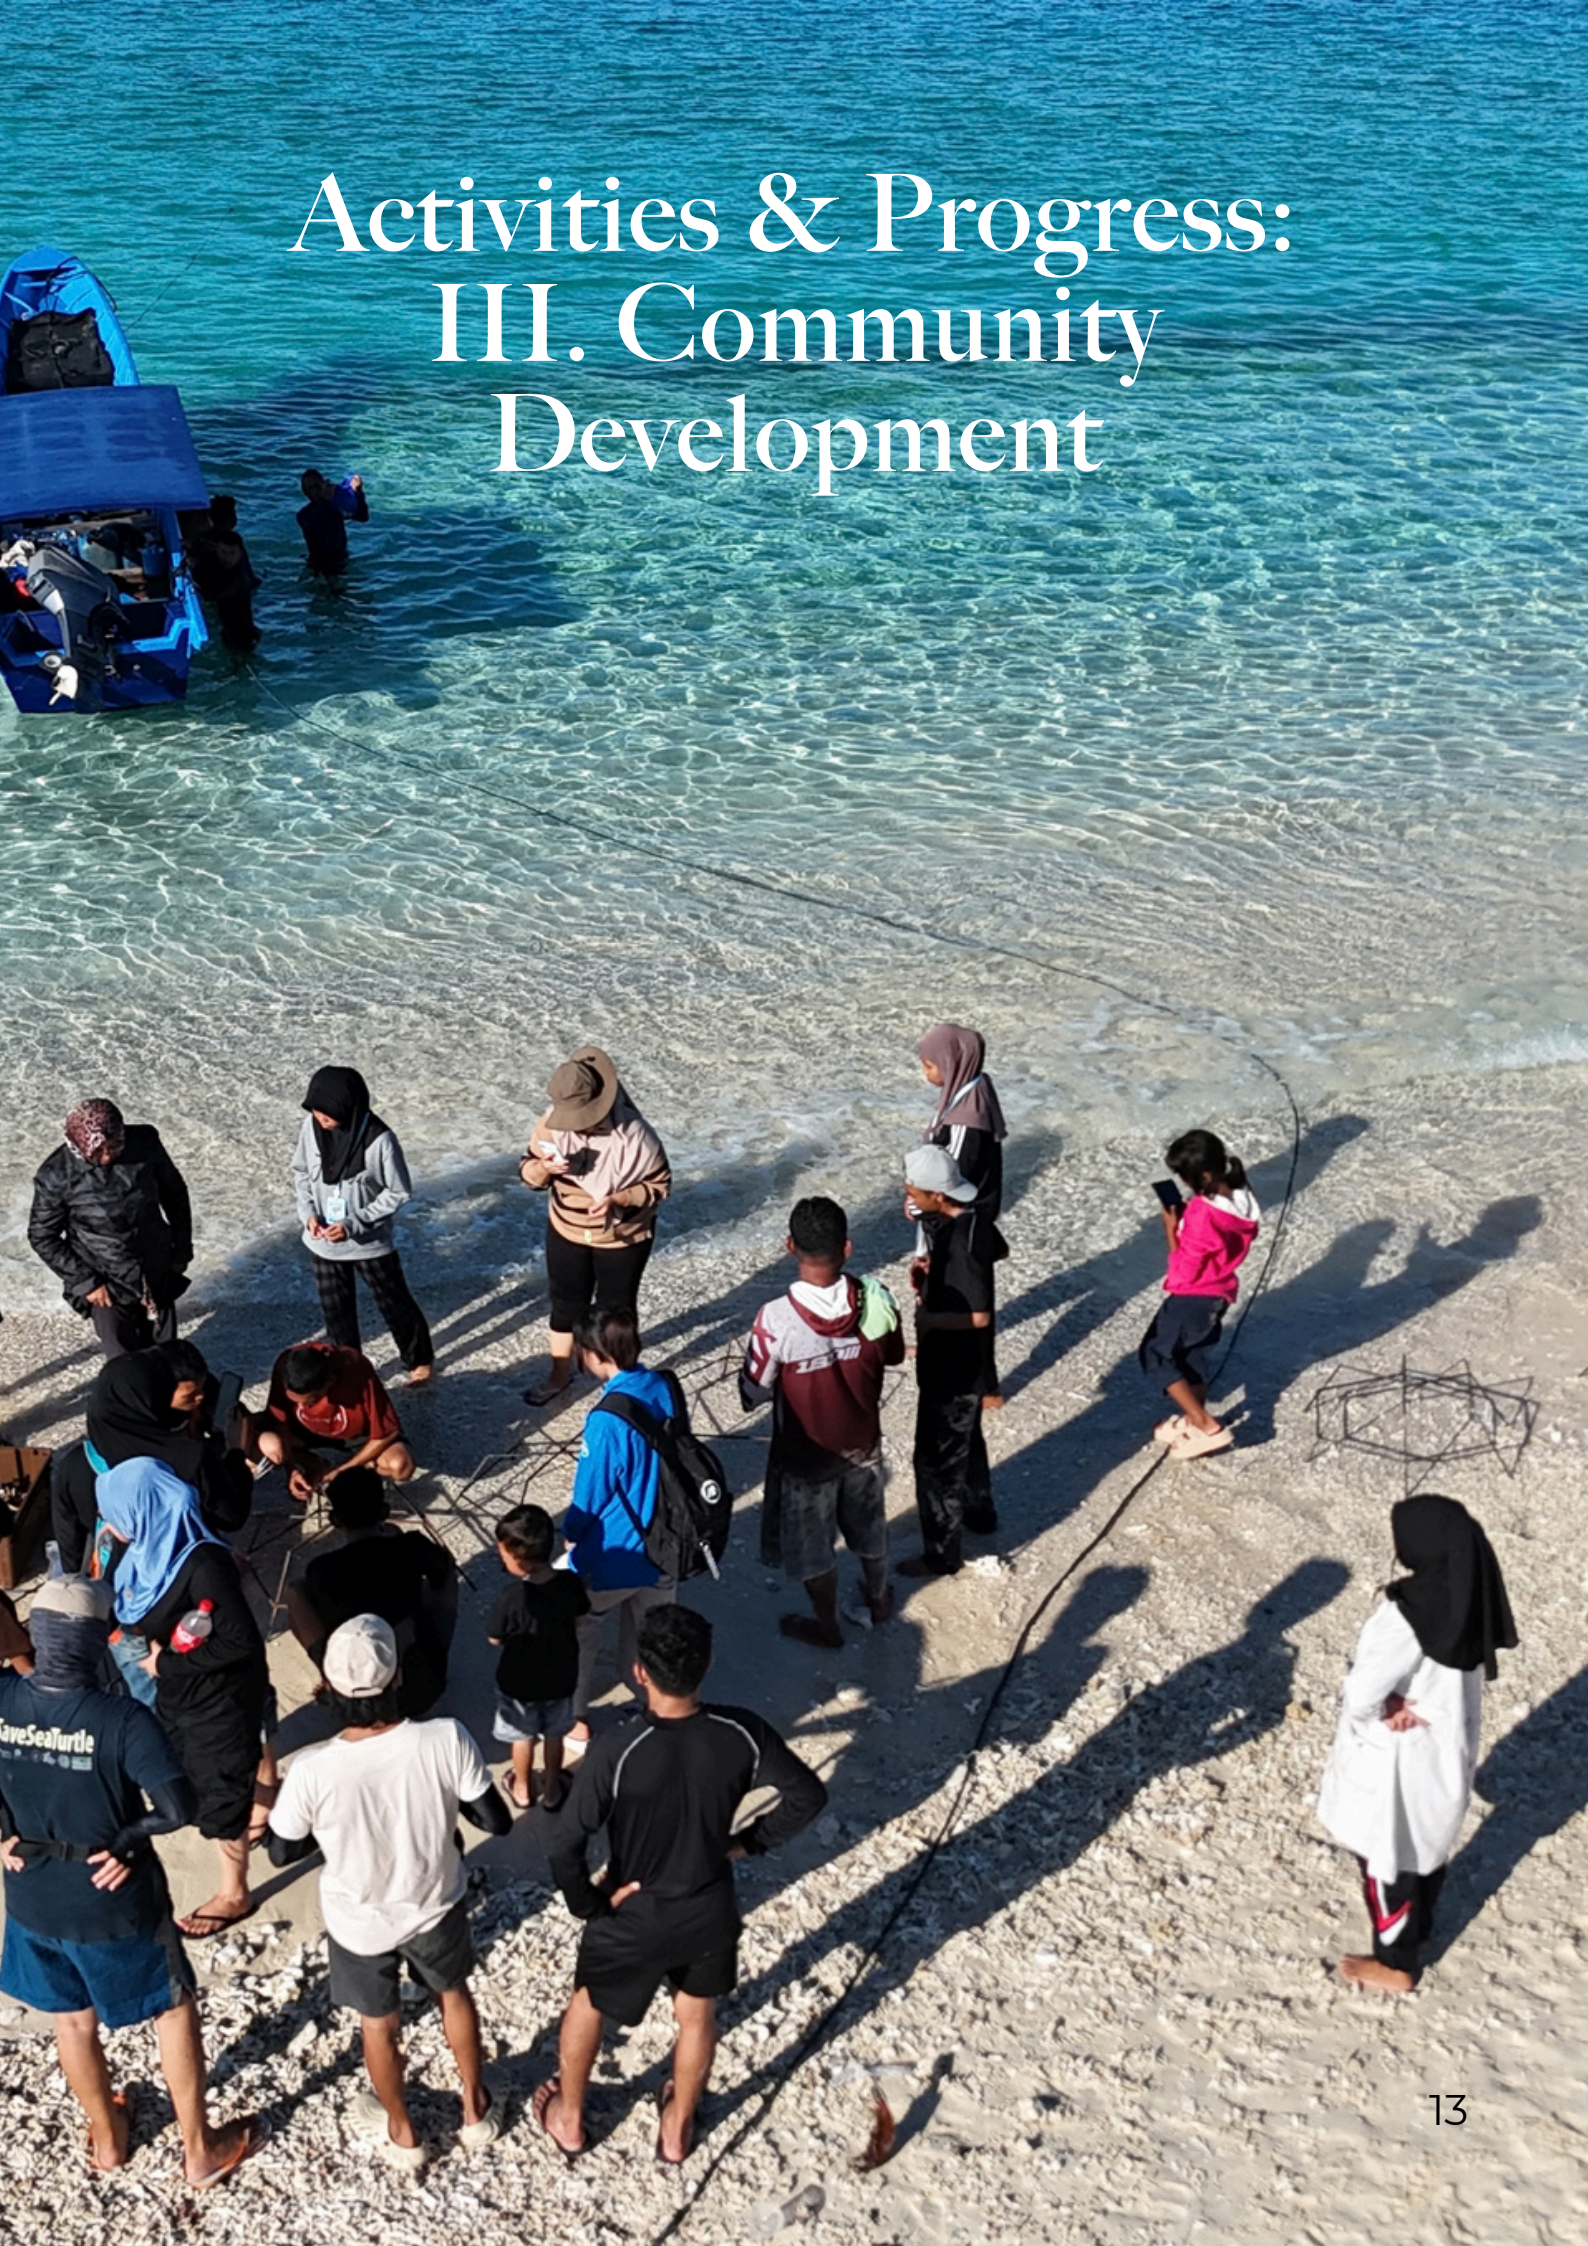

Restoration continued at a 300 square metre pilot site in a previously bombed area. On World Ocean Day in June, Blue Alliance worked with the Provincial Government, Salu Village Government and the GERSAL youth community to install fifteen spider coral modules and a fish apartment around Mantawalu Ise and Mantawalu Daka Islands in Area 5, alongside a beach cleanup. Coral restoration continues to go hand-in-hand with effective management and maintenance to ensure long lasting effectiveness.

Threat Monitoring

Crown of thorns starfish removal and the identification and protection of fish spawning aggregation sites continued through the period.

Activities & Progress: III. Community Development

Community Development

Overview

Community engagement in Banggai rests on the principle that conservation rules hold when the people living alongside a reef have a hand in setting them. Village meetings, consultations and awareness sessions continued across the network, reinforcing zoning rules and conservation objectives, with women's groups and local fisher communities actively involved in monitoring and governance.

Marine Education

A programme in Pulau Dua Village introduced children to threatened species including sea turtles, giant clams and marine mammals, and their role in the ecosystem.

Youth Capacity Building

Young people selected for the youth programme completed dive training, and Blue Alliance Indonesia staff upgraded certifications across Open Water, Advanced and Rescue Diver levels.

Cultural Heritage and Conservation

In Landonan Bebeau Village, a discussion on cultural heritage was held with support from the Indigenous Peoples Alliance of the Archipelago and the village Traditional Council, hosted at the home of Traditional Leader Mr Lapeda, exploring how customary practice supports a balanced relationship between people and the sea. A separate session at the Bonua Swadeshi Stage brought in Banggai Islands filmmaker Hendro Ariwibowo, whose work documents regional biodiversity and community challenges including fish bombing.

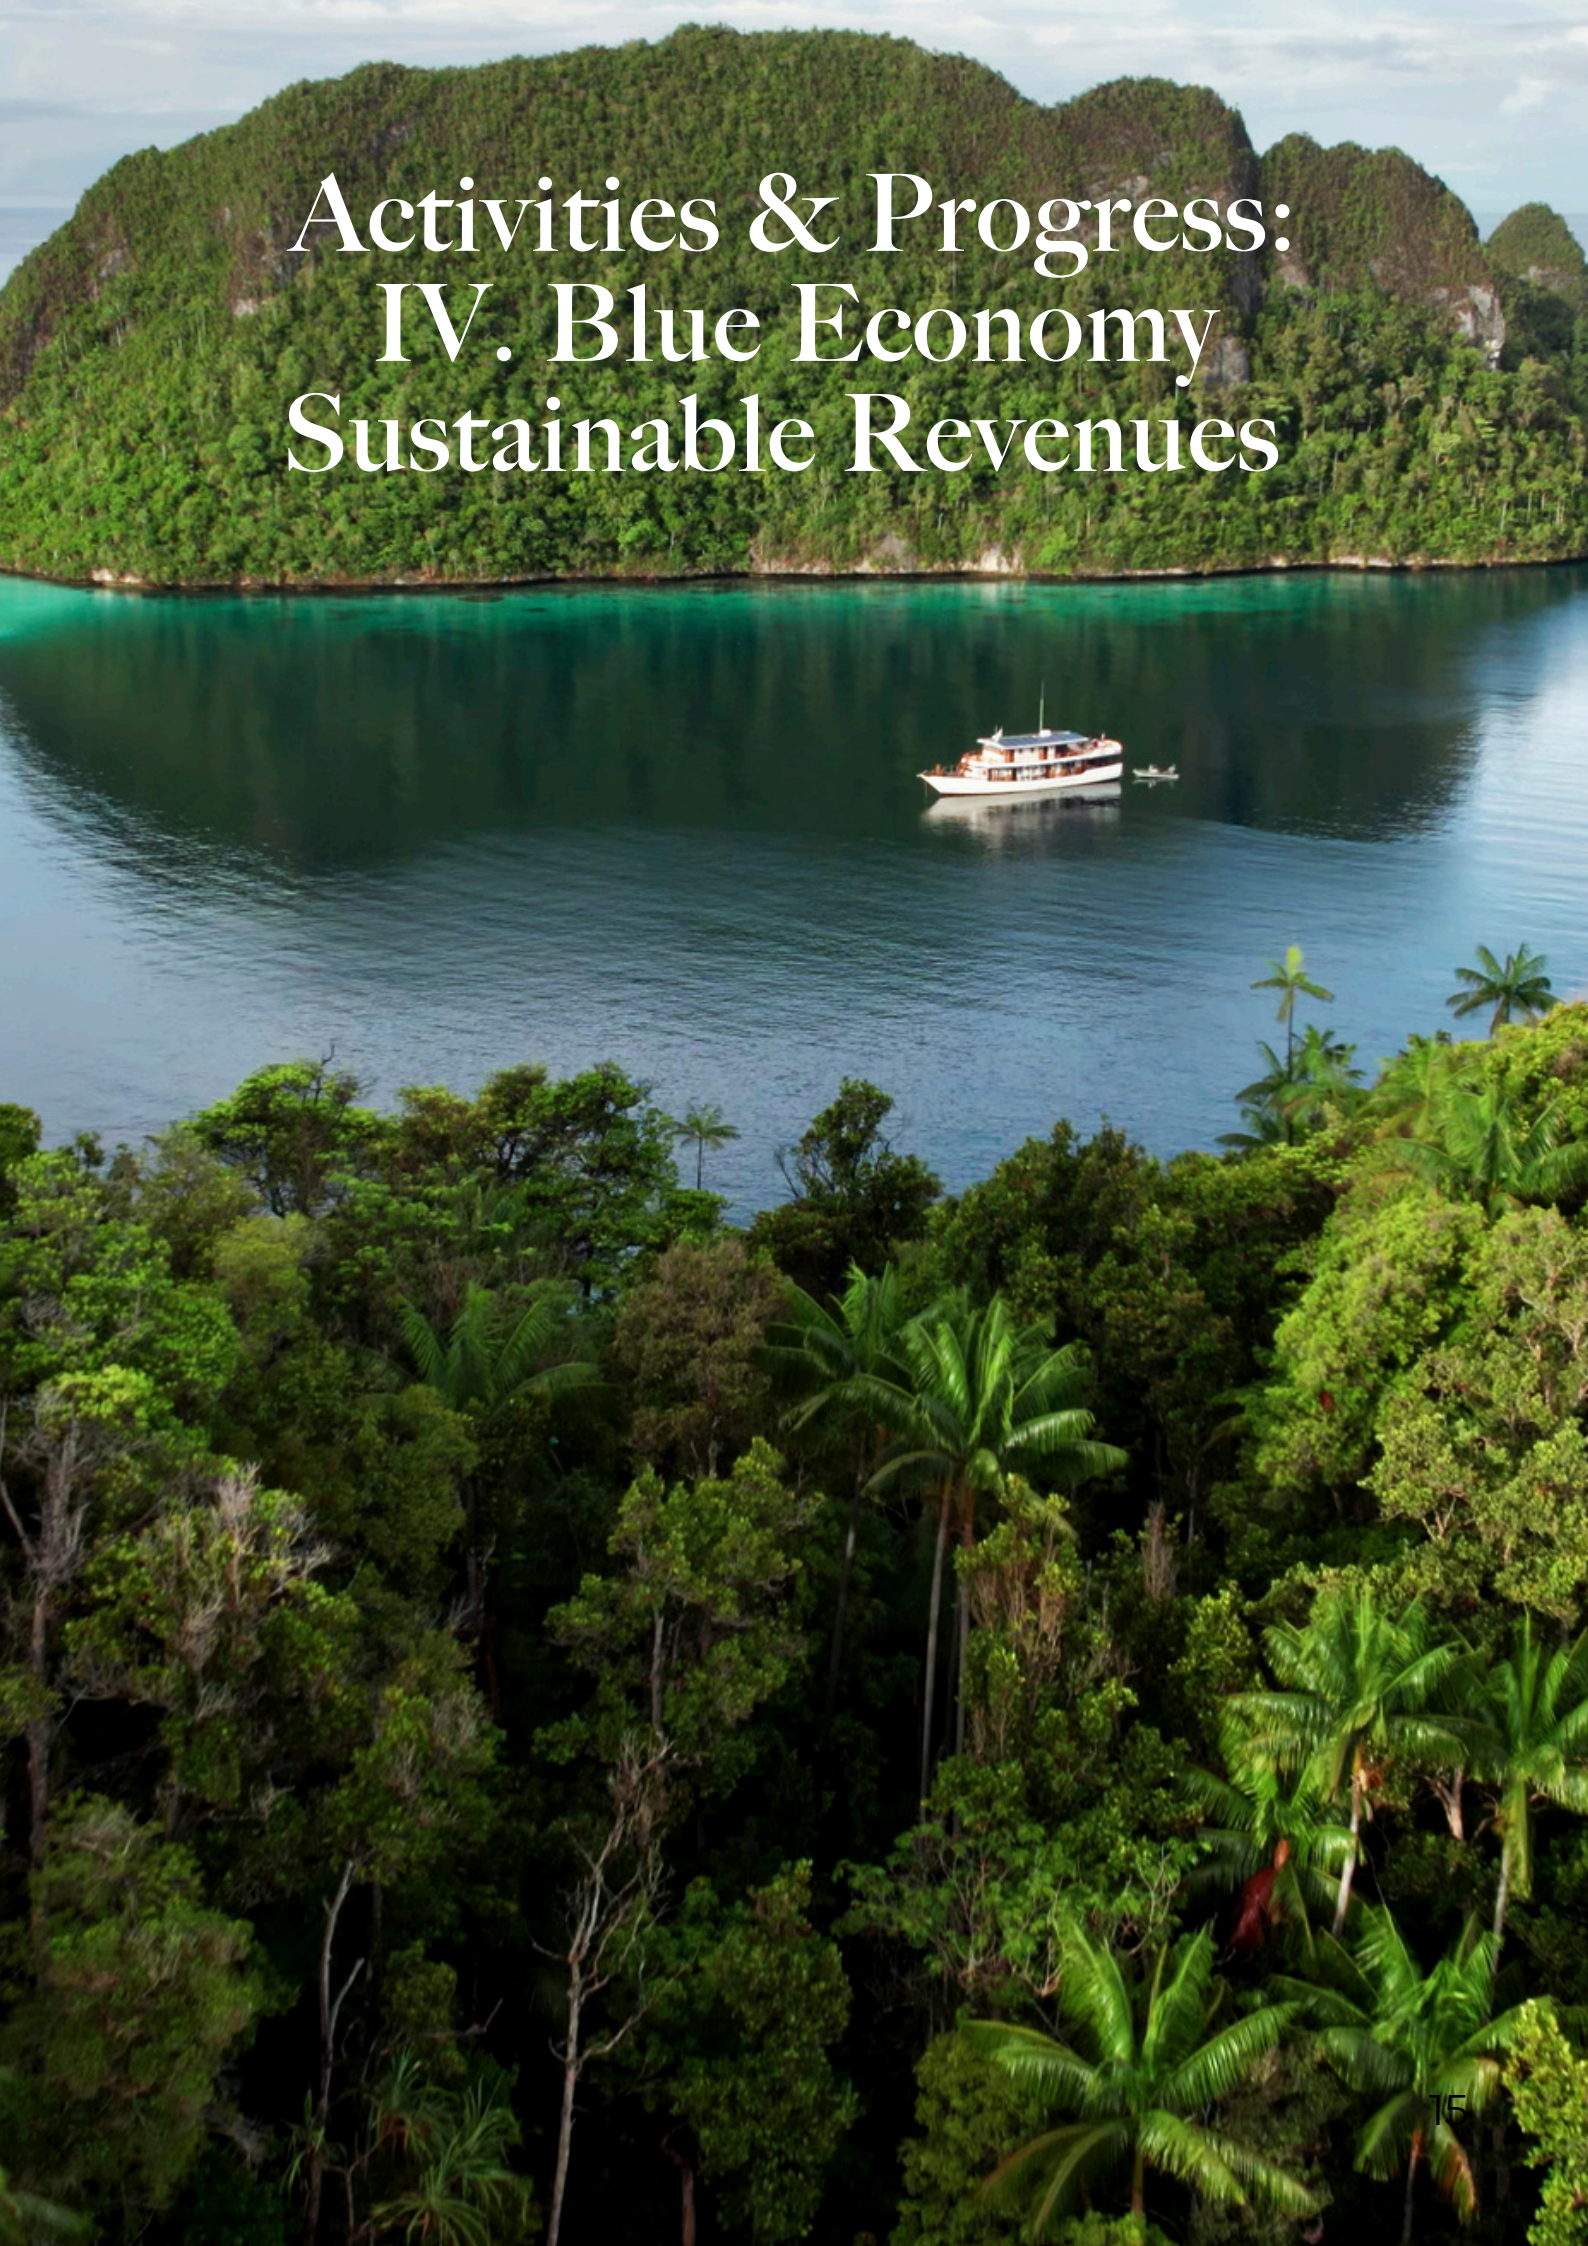

Community-Led Turtle Protection

At Kuntang Village, information boards were installed at the turtle hatchery with Tobui'ku POKMASWAS, the local Sea Turtle Rangers, the Village Head and coastal residents, setting out the hatchery location, the protection of eggs and hatchlings, and site security protocols.

Activities & Progress: IV. Blue Economy Sustainable Revenues

Blue Economy Sustainable Revenues

Overview

Two reef-positive businesses are operating in Indonesia against a target of three, with two further ventures in feasibility.

Aquahub: Community Sea Cucumber Aquaculture

The Banggai programme moved from exploratory consultation to structured pilot planning during the period, including the design of a one-hectare grow-out pen with material specifications, a preliminary budget, and standard operating procedures for juvenile sourcing, handling and acclimatisation. A field visit validated the availability of wild juveniles from the Luwuk coastal area and confirmed that transport from Luwuk to Banggai can achieve full survival when handling, oxygenation, packing and acclimatisation procedures are followed. Two grow-out pens of 2,500 square metres each are now stocked with around 1,064 sea cucumbers as part of a stocking-density trial. The business receives monthly technical advisory support from the Seacucumber Consultancy Group in Australia. Sourcing durable structural posts and reliance on wild juveniles remain the principal constraints.

aquahub

BlueWild and Coral Reef Safari Cruises: Ecotourism

The Bajau liveaboard moved from transition planning into operational management under the Coral Reef Safari (BlueWild EcoVentures Indonesia) entity, with Nomad Archipelago continuing to provide sales, marketing and hospitality support during the handover.

CORAL REEF SAFARI.ECO

EXPLORATION. UNHURRIED. PURPOSEFUL.

Sustainable Octopus Fishery

A feasibility assessment and strategic advisory delivered by Marine Change examined Blue Alliance's engagement with octopus supply chains in Banggai and Maluku. The recommended model keeps community engagement, local sourcing and block-freezing in-house, particularly in Maluku, while partnering with established processing and export companies to protect quality and limit capital exposure. A draft business plan is in development.

Blue Carbon

Blue Alliance has commissioned a screening of carbon credit regulations and feasibility in Maluku province. Pre-feasibility confirmed that approximately 5,000 hectares of mangroves under management in the Tanimbar MPA represent a significant carbon sink. Certification under Verra or Plan Vivo is being pursued, with negotiations underway with an international credit off-taker.

Maluku Conservation Area

Maluku's islands sit at the eastern edge of the Coral Triangle, where we co-manage 1,500,000 hectares of marine conservation areas under a long-term exclusive agreement with the Provincial Government of Maluku, signed on 12 February 2026. These remote waters are among the deepest and least surveyed in Indonesia, and their reefs, seagrass beds and channels support dugongs, hammerhead sharks, manta rays, sea turtles and whales; the region is also part of the 50 Reefs Initiative. Coastal communities have managed their fisheries for generations through sasi, a customary practice of temporary closures. Our role is to provide the staff, boats and financing that effective protection requires, while strengthening the customary systems already in place. We are also developing a community-based octopus supply chain, after a feasibility study confirmed strong potential for two high-value species caught with traditional, selective lure-fishing methods.

Maluku: A New Conservation Area

Overview

On 12 February 2026, the Maluku Provincial Marine and Fisheries Agency and the Blue Alliance Indonesia Foundation signed a long-term, exclusive delegated management agreement covering marine conservation areas and associated OECMs across the province. It is the largest single addition to Blue Alliance's portfolio to date and brings global total area under active management to 3.4 million hectares, around 1.5 percent of the world's coral reefs.

Why Maluku

Maluku sits within the Coral Triangle and forms part of the 50 Reefs Initiative, a global selection of reef systems identified as most likely to survive climate-related pressures. It provides critical habitat for manta rays, endangered sharks and threatened turtles, refuge for the endangered Napoleon wrasse, and supports more than 25 grouper species. Field surveys in the Tayando Archipelago confirmed exceptional biodiversity. They also found evidence of blast fishing by non-local fishers at over 70 percent of the twelve sites surveyed.

Setting Up

A joint 2026 work plan was agreed with the Maluku Provincial Marine and Fisheries Agency (DKP Maluku), covering more than 70 activities across compliance, biodiversity conservation, monitoring and community engagement. Deployment is phased, with four MPAs prioritised for 2026 and the remainder from 2027.

Team & Bases

Ten of the fifteen Maluku positions planned for 2026 have been filled, including an Enforcement and Compliance Coordinator, who joined in May, and a Livelihood and Engagement Coordinator. Recruitment of rangers, community officers, a science officer and a local aquaculture officer is underway. Three programme offices are already set up.

Baselines

Screening surveys in Romang, Damer, Tanimbar and Tayando identified representative sites for fish biomass, fisheries and full ecological monitoring. Management-effectiveness (MEAT) baselines are being established, with a target score of 43 by the end of 2026. A desk-based assessment of mangrove carbon stocks has been completed, mostly in Tanimbar.

Threats Confirmed

Early fieldwork found blast fishing at over 70% of surveyed Tayando sites, indications of poison fishing in Ritabel, and the poaching of two green turtles in Lamdesar Timur.

Partnerships

Coordination is underway with district and provincial governments, the national Ministry of Marine Affairs and Fisheries, the Damer and Maluku Barat Daya police, and WWF Indonesia.

Maluku: A New Conservation Area

Damer

Community socialisation was delivered across seven villages jointly with the provincial agency, a field office was secured in Wulur village, and coordination began with the Damer police, who support the conservation programme and run school-based education.

Romang

Manta tow reef-health surveys were conducted, and community ranger candidates were identified together with the village heads of Hila, Solath and Jerusu. On 30 June, a participatory forum in Solath village brought together village and district officials, the navy, church and youth groups and the local POKMASWAS. Participants agreed seven joint commitments, including reinforcing sasi and developing community-based surveillance.

Tanimbar

Seven community surveillance members were identified within the MPA, with village engagement across Ritabel, Keliobar, Lamdesar Barat, Lamdesar Timur, Watidal and Kelaan. A dugong assessment was scoped for Tanimbar Utara, and a citizen science cruise ran from 26 April to 5 May.

A Community-Led Closure

In early June, Kelaan village established a temporary customary closure for sea cucumber, known as sasi, agreed with customary, church and village leaders and supported by a monitoring protocol. It is the first community-initiated conservation measure of the Maluku programme, and it came from the village with support from Blue Alliance.

Community Leaders

12 of 40 local heads have agreed to host awareness and sustainable fishing sessions.

LOCAL STORYTELLER FEATURES

LOCAL STORYTELLERS

A monthly series sharing human stories from the frontlines of ocean conservation.

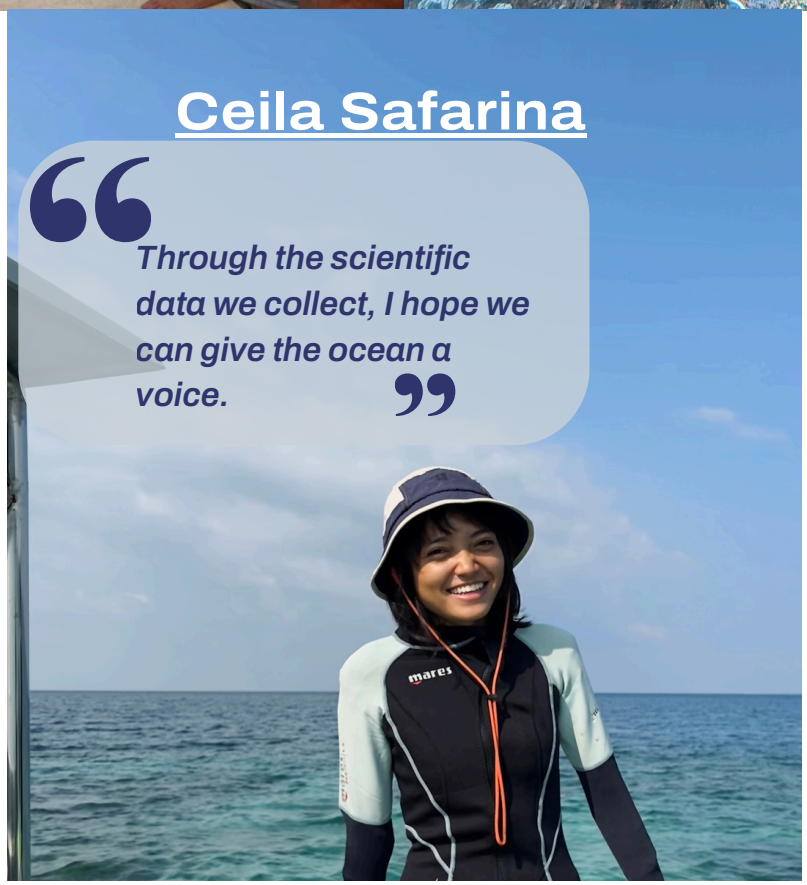

Sriwahyuni Salatun

I hope I can continue to contribute to society through environmental sustainability. Time is an opportunity, I want to keep growing with Blue Alliance.

OUR PARTNERS

GOVERNMENT PARTNERS

- Ministry of Marine and Fisheries of Central Sulawesi Province
- Directorate General of Marine and Fisheries Resources Surveillance
- Provincial Government of Maluku

OUR STRATEGIC FUNDING PARTNERS

Our unique blended finance vehicle provides funding for the effective management of MPAs, and up-front investment and early-stage working capital for the implementation of sustainable blue economy businesses. We work closely with our funding partners and regularly report on progress and our long-term impacts:

BNP Paribas has committed €200 million in impact investments to support enterprises that generate positive outcomes in climate action, local development, social inclusion, and natural capital preservation. As the anchor lender in Blue Alliance's USD 2.4 million Senior Term Facility, BNP Paribas is the cornerstone institutional partner of our blended finance vehicle for marine conservation.

Blue is a philanthropic fund committed to supporting conservation initiatives that generate both environmental and social impact. Through a repayable grant structure, they are supporting Blue Alliance's management of the Pemba Channel Conservation Area in Zanzibar, with a focus on developing sustainable livelihoods for coastal communities. Their investment contributes to the development of the Manta Underwater Room, a unique ecotourism asset that generates revenues reinvested directly into MPA management.

Builders Vision is a philanthropy and impact investment platform committed to transforming food and ocean systems. They sit at the intersection of grant-making and investment, with a portfolio that includes S2G Ventures and a focus on sustainable fisheries, food security, and system-level change. They are supporting Blue Alliance's work on fisheries, blue economy development, and innovative financing approaches, with shared interest in models that link conservation outcomes to scalable investment pathways.

The **UBS Optimus Foundation** mitigates climate change while supporting vulnerable communities and sustaining biodiversity, which sits at the core of their environmental philanthropy mission. The foundation is supporting us both in improving the monitoring of impacts of our conservation efforts as well as developing our portfolio of reef-positive businesses in the Philippines.

The Global Fund for Coral Reefs (GFCR) is a global blended finance initiative dedicated to securing a future for coral reefs and the communities that depend on them. The coalition strengthens the resilience of coastal reef ecosystems, communities, and economies by mobilising new public and private resources that advance sustainable businesses and innovative financial solutions. The GFCR has been providing long term support to our MPAs and reef-positive businesses in the Philippines and Zanzibar since 2024.

The **Trafigura Foundation** is the philanthropic arm of the Trafigura Group, structured around sustainable livelihoods, prepared communities, and thriving nature. They are funding Blue Alliance's project “Expanding Marine Conservation for Thriving Communities and Coral Reefs” across Indonesia, the Philippines, and Tanzania, supporting the replication and long-term scaling of our model globally.

The **GenEM Foundation** supports sustainable livelihoods in emerging markets by providing catalytic social investments and grants to revenue-generating enterprises that benefit marginalized communities. The foundation is supporting our portfolio of enterprises in the Philippines.

Bloomberg Philanthropies advances science-based, high-impact marine protection through the Bloomberg Ocean Initiative, supporting the conservation of climate-resilient coral reefs and the global 30x30 target. Together with partners, they co-fund major ocean protection programmes spanning MPA establishment, sustainable fisheries, and offshore conservation. They are supporting Blue Alliance's MPA management and reef-positive business development in Indonesia, with a focus on Maluku.

The **Swiss Re Foundation** reflects the social and humanitarian values of Swiss Re. They are supporting the "Blue Economy for Marine Protected Areas" project in the Philippines, focused on MPA co-management, reef-positive businesses, and blended finance development, under their coastal resilience and natural hazard risk management focus area.

Funded by the Foreign, Commonwealth & Development Office (FCDO), **UK Aid** Direct supports small and medium sized civil society organisations (CSOs), based in the UK and overseas, to achieve sustained poverty reduction and the United Nations' Global Goals. UK aid is supporting the development of our MPAs and reef-positive businesses activities in Indonesia.

The **Paul M. Angell Family Foundation** is a US-based private foundation focused on marine conservation and biodiversity protection. They support Blue Alliance's work in Indonesia, with an initial grant for MPA management in Maluku. Their funding prioritises coral reef health, species protection, and community-based conservation, with particular interest in field-level evidence and biodiversity outcomes.

Wilstar Impact Investing is a Norwegian philanthropic funder with a strong emphasis on measurable impact and societal value. They are supporting Blue Alliance's management of large-scale conservation areas and blue economy development in Indonesia, assessed against programme-level outcomes spanning reef health, livelihoods, enterprise development, and blended finance mobilisation.

Milkywire is an impact-driven organization that enables businesses to invest in high-integrity climate and nature projects, such as carbon removal and biodiversity protection, creating measurable environmental impact across more than 40 countries. They support our activities in Banggai, Indonesia.

The **Ocean Risk and Resilience Action Alliance (ORRAA)** is a multi-sector alliance connecting governments, financial institutions, insurers, multilateral organisations, civil society, and local partners to accelerate investment in coastal and ocean resilience. Through its Sea Change Impact Financing Facility (SCIFF), funded by the UK's Department for Environment, Food and Rural Affairs, ORRAA is supporting Blue Alliance's conservation and blended finance development activities in Indonesia.

The **Catalytic Climate Finance Facility** is a joint initiative between Convergence Blended Finance and the Climate Policy Initiative, designed to accelerate high-impact, ready-to-scale financial structures for climate action in developing economies. Through a repayable grant and acceleration support, they are supporting Blue Alliance in developing and upscaling its blended finance vehicle for marine conservation globally.

Blue Natural Capital Financing Facility (BNCFF) supports the development of sound, investable Blue Natural Capital (BNC) projects with clear ecosystem service benefits, based on multiple income streams and appropriate risk-return profiles. BNCFF is supporting the development of our approach in the Philippines.

AXA Climate, a division of the AXA Group, supports public and private organizations in adapting to climate and environmental challenges through parametric insurance, climate risk consulting, sustainability training, and data-driven tools that promote regenerative business practices. They provide our parametric climate insurance in the Philippines.

Humanity Insured, supported by the Howden Foundation, provides premium subsidies for innovative insurance solutions that help vulnerable communities (such as farmers, coastal populations, and displaced individuals) prepare for and recover from climate shocks like drought and extreme heat. They support our parametric climate insurance in the Philippines developed with Axa Climate.

The **Levine Family Foundation** focuses primarily on marine conservation, supporting charitable initiatives through grants and commissioned research to promote ocean health and sustainability. They support our activities across all geographies for the management of the MPAs and the reef-positive businesses.

IXM is a global metals trader headquartered in Geneva, committed to responsible business practices and ESG impact across its trading footprint in Africa and Southeast Asia. Through its Social Impact Committee, IXM supports Blue Alliance's community ranger programmes, reef protection, and biodiversity monitoring, and coastal community engagement in Tanzania and Indonesia.

OUR IMPACT AND SDGS

Our work is focused on building significant long-term impacts. Whether in today's actions or long-term planning, to us, impact always comes first. Our MPA work is aligned with the United Nations Sustainable Development Goals (SDGs). We are actively enabling ocean-positive environmental and societal impacts in alignment with the following SDGs:

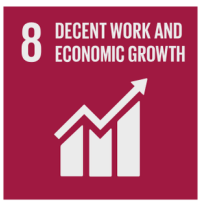

Reduction of poverty: we help coastal communities to sustainably increase fishery productivity and to develop alternative sources of protein.

We help coastal communities to **sustainably achieve food security and improved nutrition**, while promoting sustainable agriculture.

We work towards **gender equality** via female-focused job creation and training.

Growing **sustainable tourism** and community based aquaculture businesses to **create jobs.**

Reducing waste and promoting resource efficiency and responsible practices, specifically within reef-positive businesses.

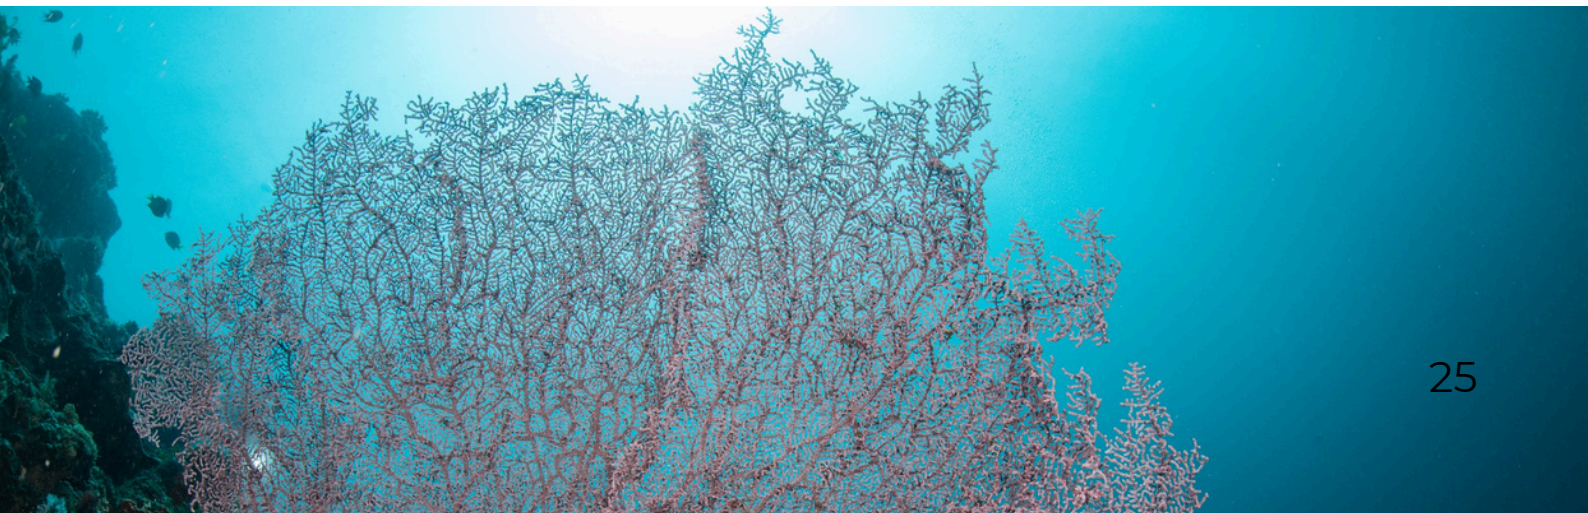

Increasing climate change resilience and contributing to climate risk mitigation through improving the health of natural marine and coastal ecosystems, and protection for coastal communities from climate change-derived high-energy events.

Regeneration of coral reef ecosystems and endangered species – we focus on reducing harmful fishing practices through a combination of enhanced law enforcement and awareness initiatives, long-term community development and engagement programmes, and developing alternative ways of earning a living.

We strengthen the **means of implementation** and revitalise the **global partnership for sustainable development.**
